

Abstract

The present invention relates to a fixed transmitting station of a wireless telecommunication system comprising:

- antenna means (104, 106, 108)
- 5       - measurement means (110, 112) for electromagnetic field measurements of an electromagnetic environment of the antenna means,
- means (112, 118, 116, 120, 122) for transmitting of data being indicative of a measurement result to a central control unit (124).
